## Standard Operating Procedures for Plumbers Hepatitis A/B & Tetanus vaccines

---

Workplace hazard assessment has been performed by Environmental Health Safety & Risk Management for the job category of “Plumber” and applies to positions with work duties and tasks that involve similar exposure to wastewater and raw sewage. The assessment has shown that a potential occupational exposure to workers exists (See Occupational Exposure Hazards Matrix for Plumbers document).

Aggie Health & Wellness Medical Director recommends *Hepatitis A/B and Tetanus* vaccines.

The following Standard Operating Procedure has been created.

### Steps 1- 5

1. Supervisor registers employee for training “Bloodborne Pathogen- Preventing Occupational Exposure”.
2. Supervisor sends employee to Aggie Health & Wellness center for vaccinations.
3. Employee is provided *Hepatitis A/B and Tetanus* vaccinations through Aggie Health & Wellness center, at department unit expense. Vaccines given in a series will require multiple visits to Aggie Health & Wellness center.
4. Record of employee’s vaccinations is kept at Aggie Health & Wellness center and documentation that vaccines were received or declined by employee is sent to supervisor.
5. Supervisor is responsible to ensure records are kept in employee medical file.
